SAP Announces Plans for First Big Data Innovation Center and Innovation Lab With Universities

WALLDORF — SAP AG today announced the planned launch of its first Big Data innovation center in a cooperation between the [SAP University Alliances](#) program and the University Competence Center (UCC) location at Otto-von-Guericke University in Magdeburg, Germany. As part of this relationship, the company also announced the anticipated opening of the first SAP University Alliances Innovation Lab with the Institute of Enterprise Systems (InES) at the University of Mannheim. Additional Big Data innovation centers at UCC locations and innovation labs at universities worldwide are planned.

"SAP already offers the SAP HANA platform for teaching purposes at universities," said Dr. Bernd Welz, executive vice president, global head of Solution and Knowledge Packaging SAP. "With Big Data innovation centers at UCC locations, the company is planning to enable academics worldwide to leverage SAP HANA to re-invent business processes based on new Big Data applications. The lab would also be used for Big Data-driven research across a wide range of applications such as genetics, geology or physics."

Competences

Hosting

- Professional 24/7 data center operation in private cloud
- Continuous system lifecycle of
 - Hardware, operating systems, databases, SAP systems

Support

- Technical and application support for professors and lecturers
- Availability via SAP Service Desk and hotline (8am to 6pm)
- Conducting train-the-lecturer courses

Curriculum Design

- Developing teaching and learning environments (TLE) consisting of
 - SAP system landscape
 - Model company
 - Teaching material

New English textbook

Details: <https://www.espresso-tutorials.com/product/introduction-to-sap-s-4hana/>

SAP S/4HANA Global Bike 4.2 (Summer 2024)

SAP S/4HANA 2022 FPS 1

- 15 extensive learning modules with 40,000+ pages

- NEW** SAP Enable Now (all exercises)
- NEW** Financial Accounting (FI-AA) & TRM – config & teaching material
- NEW** Enterprise Asset Management (EAM) – teaching material
- NEW** Integration Case Study (SD, MM, PP) – config & teaching material
- NEW** Variant configuration – config & teaching material
- NEW** Cost Unit Accounting – config (& teaching material)
- NEW** Profitability Analysis – config (& teaching material)
- NEW** Simulated sales data for Global Bike

NEW Sustainability Curriculum

CASE STUDY

Challenge 1: Solve Missing Data Errors

Challenge Solve all remaining missing data errors.

Time 20 min

Description Use the *Data Issues* app to check and handle all remaining data issues resulting from missing data in your compliance scenario.

Remember that you had solved two missing data errors in a previous step. In return, however, the new data points for May 2024 in both of your collections had caused two new missing data errors. Analyze their root cause and solve them. All information and practical knowledge necessary for this challenge is given in this case study.

You will have succeeded with this challenge when there are no more missing data issues for the reporting period (here: from *Jun 2024* to *Sep 2024*).

Scenario

Jun 2024
Sep 2024

CASE STUDY

Challenge 2: Calculate Annual CO2 Equivalent

Challenge Create another data calculation.

Time 20 min

Description Use the *Manage Compliance Scenario* app to calculate the annual CO2 equivalent for the new packing station.

For most ESG reports, environmental KPIs are summarized to annual figures. You are tasked to create the KPI *Annual CO2e for Energy Mix*.

Scenario

Requirement 1 Due to the size of this value express your result in kilograms, not grams.

Requirement 2 Present your result in a chart and in a table.

You will have succeeded with this challenge when you are able to show the figures shown below for 2024.

Analytical Sustainability – Travelled by

Analytical Sustainability – CO2 Emissions

Analytical Sustainability – Challenge

Challenge 1: Creating a *Challenge* Page

Challenge Create an additional page.

Time 15 min

Description Use page template *Page 2* and create a page with a tree map.

In the Distribution category, SAP Analytics Cloud offers various chart types that help illustrate the distribution of individual values and their proportions within the data. These display options include box plot, heat map, histogram, radar chart, and tree map.

A tree map chart uses visual structures and colors to represent correlations. The size of the nested rectangles represents a certain value proportionally. The color gradient of the tiles indicates a range of values, which is particularly useful for displaying measures in relation to each other.

Create a tree map diagram based on your **Global Bike Travel Data** model. Represent the *Total Travel Distance* by country and city.

Tree Map

Question Why is the *Total Travel Distance* so high for Munich and Hamburg?

Name the page Challenge. Compare your result with the screenshot below.
